DIGITAL LITERACY PROJECT REPORT

Name: **Shourya Singh**

Registration Number: **25MEI10042**

Course: CSE0001 – **Digital Literacy**

INTRODUCTION

Digital literacy is an essential skill in today's modern world. It refers to the ability to use digital tools, platforms, and technologies effectively and safely. With the rapid growth of the internet, it is important for individuals to understand how to communicate, create, and protect information online.

This project focuses on developing basic digital skills such as content creation, professional profile building, coding practice, and online collaboration. It also highlights the importance of cybersecurity and responsible digital behavior.

TASK 1: INFOGRAPHIC CREATION

In this task, I created an infographic on the topic of digital literacy using Canva. The infographic includes key points such as online safety, digital communication, cyber awareness, and responsible internet usage.

Through this activity, I learned how to present information visually in a simple and attractive way. Canva provided various templates and design tools which helped me create a neat and informative infographic.

TASK 2: PROFESSIONAL PROFILES

In this task, I created and updated profiles on GitHub, LinkedIn, and HackerRank. These platforms are important for building a strong digital presence.

GitHub was used to upload and manage my project files. LinkedIn helped me create a professional profile where I added my education and skills. HackerRank was used to practice coding and improve problem-solving abilities.

This task helped me understand how these platforms can be used for career development and networking.

TASK 3: ONLINE PLATFORMS

In this task, I worked on two platforms: HackerRank and Google Forms.

On HackerRank, I solved a beginner-level problem called “Solve Me First,” which helped me understand basic coding and how to submit solutions online.

I also created a Google Form titled “Digital Literacy Awareness Quiz” with five questions related to digital safety and awareness. The responses were recorded in a Google Sheet for analysis.

This task helped me learn how online tools can be used for both coding practice and data collection.

TASK 4: EMAIL COMMUNICATION

In this task, I drafted a formal email based on a given scenario. The email was written using proper format including subject, greeting, body, and closing.

This activity improved my understanding of professional communication and how to write clear and formal emails.

TASK 5: CASE STUDY

IMPACT OF DIGITAL LITERACY ON ONLINE SAFETY

In this case study, the focus is on understanding how lack of digital literacy can lead to serious cybersecurity issues. A scenario was considered where an individual received a message claiming that their bank account would be blocked unless immediate action was taken. The message contained a link directing the user to a fake website that looked similar to the official bank website.

Due to lack of awareness, the user clicked on the link and entered sensitive information such as login credentials and OTP. As a result, unauthorized transactions were made from the user's bank account, leading to financial loss.

The key problem in this case is the inability to identify fraudulent digital content. The user was not aware of common cyber threats such as phishing and fake websites. This shows the importance of digital literacy in recognizing online risks.

Several important observations can be made from this case:

- The message created a sense of urgency to manipulate the user.
- The link provided was not from an official domain.
- The user did not verify the authenticity of the source before taking action.

To prevent such incidents, the following measures are recommended:

- Users should always verify website URLs before entering any personal information.
- Sensitive details such as passwords and OTPs should never be shared.

- Two-factor authentication should be enabled for all important accounts.
- Awareness about phishing and cyber fraud should be increased through education.
- Regular updates of software and use of antivirus tools should be ensured.

This case study clearly demonstrates that digital literacy plays a crucial role in ensuring safe and secure use of the internet. Being digitally literate helps individuals make informed decisions, avoid online threats, and protect their personal and financial information.

In conclusion, improving digital awareness is essential in today's digital world to prevent cybercrimes and promote responsible use of technology.

CONCLUSION

This project helped me improve my digital literacy skills in multiple areas such as design, coding, communication, and online collaboration. I learned how to use various tools like Canva, GitHub, HackerRank, and Google Forms effectively.

Overall, this project was very useful in developing practical digital skills that will help me in academics as well as in my future career.
